

I am encouraging you to reject the NAB's petition 04-160. I live in an area that does not get radio reception in the traditional manner when traversing from the Antelope Valley to the Los Angeles basin in California. I, not only pay for my satellite radio, but depend on it as I travel for traffic and weather conditions. There is no other way for me to get that info as I am driving through the Santa Susanna mountains. Please consider this information when the time comes for a common sense decision.

Thank you,
Brian Jones
